PROZZO®
COLLECTION

CELEBRATING THE EXCITEMENT

Along with the varieties in design, varieties in size play an important part in developing a distinct collection. As you know, 'Simpolo' leaves no stone unturned when it comes to fulfilling the consumer's needs. Here is an exciting new collection of the size that everyone accepted with a warm heart and broad mind - 80x160cm.

'PROZZO - 80x160cm' is our latest collection that is developed after studying the trends thoughtfully. The balance between cold designs and warm designs has been maintained carefully for you to be able to choose the best suitable design for your dream space.

CARVING
EFFECT

THE SILENT ACHIEVER

There are silent achievers, who celebrate without saying it out loud and goes on discovering the path to their success. 'Carving Effect' is dedicated to them. It is a digital application done on the tile surface with high accuracy. It has the ability to surprise you when you put your hands on it and see it from different positions in different light conditions.

* IMMEDIATE CLEANING ACTION IS THE BEST WAY
* CHEMICALS REFERENCE ARE FOR FIRST SUGGESTION FOR ANY DETAILS CONTACT COMPANY PERSONNEL
DO NOT USE THESE CHEMICALS WITHOUT CONSIDERING EXPERT SUGGESTIONS

Note: It is recommended that any kind of stain needs to get clean immediately / as soon as possible.

Sintering Technology

The latest Sintering Technology is capable of reaching very high temperatures up to 1225°C. and above, therefore the technical characteristics of ceramics are strengthened and amplified. The resultant product has high strength with certain amount of Elastic flexibility.

Impact Resistance

This material has incredible Strength, MOR is 40N/mm² (Granite is 13.8N/mm²). breaking strength ³000N (at least ³0% to 40% better than Granite) and an impact resistance of 0.55.

Zero Water Absorption (>0.06%)

The sintering at exceptionally high temperatures renders the product resistant to Scratching, staining and fading because of it's near zero water absorption (>0.06%) whereas in case of Granite, it is 0.15%.

Stain Resistant

Low porosity makes these sintered surfaces impervious to harsh chemicals like bleach, hydrochloric acid and other cleaning agents. Sintered slabs are able to withstand extreme heat and can be spray painted with no irreversible damage to the material.

Cleaning & Maintenance

Introduction

All SIMPOLO Slabs are easy to clean and maintain. Regular cleaning highlights the aesthetic features of the Tiles and gives the floor and Wall exceptional shine.

Initial Cleaning

The initial cleaning done immediately after the flooring laid is of essential importance for removing all mortar, adhesives and epoxy residues that may be left in the joints. In this initial phase, we recommend that you use an acid product such or Clenza, in a 1:5 concentration.

Rub energetically to obtain the maximum cleaning. After washing the floor, which is just as important, rinse thoroughly with plenty of water to remove all traces of the detergent used. These steps are recommended for all SIMPOLO collections.

Maintenance & Care

Thanks to the characteristics of the production process (high firing temperature, raw materials of great quality, sinterizing process), the surface of SIMPOLO material is waterproof (the water absorption is minimum). Therefore the dirt cannot penetrate but it is necessary to remove it from the surface. For this procedure do not use detergents containing waxes or waxing products, in order to avoid the forming of greasy layers; for

choosing the most appropriate detergent refer to the following chapters. After the installation of floors, particularly of those made with polished materials, the surfaces should be adequately protected with particle board or other suitable materials in order to protect them from dirt and on-site processing. This prevents damage caused by subsequent processing.

General Recommendations

For commercial and heavily used surface areas such as airports, hospitals, supermarkets, and any public spaces with heavy foot traffic which are thus subject to considerable soiling, it is necessary to use automatic cleaning machines with suction of the washing liquids.

This allows not only deep cleaning, but also the continuous removal of liquids containing substances that cause soiling, thus preventing the formation of films which are very difficult to remove. Any detergent on the market can be used in the desired concentration

Posh/Matt Slabs

For these Tiles, after completing the steps described in the section "Initial Cleaning", you only need to clean the floor with hot water containing small quantities of an alkaline detergent such as Red Harpic & Clenza in a concentration 1:200. On these types of surface it is not

advisable to apply a waterproofing product: the absence of porosity causes the waterproofing agent to deposit on the surface in an uneven way and to have unpleasant aesthetic effects.
